

Pierce County Bus Riders Beware

To generate this visual, transit route data was downloaded from the Pierce County geospatial portal and flood plain data was retrieved from Pierce County Public Transit's geospatial portal. Both data sets were clipped to the borders of a Pierce County basemap. Transit data was dissolved to simplify the visual and dissolved routes were intersected with the floodplain data to create a layer showing only the floodplains that impact transit. Next, a join was done to combine the transit hazards and routes. Finally, the field calculator was used to normalize the percent of each route that is compromised by flooding.
